

Follow us!

April 2016 – Starting point Lannion

Demonstration of an integrated solution
within COMBO project involving 15
European partners

June
2016

First deployment
of MoBcache at
Rennes University
campus

Dec
2016

CAMION system
ready and integrated
with FON solution

Second deployment
of MoBcache in
Rennes event facility

Q1 2017

MoBcache is
ready for mass
deployment

Q2 2017

First deployment of
CAMION

Q3 2017

Adding "fog"
computing
capabilities

Q4 2017

CAMION is ready
for mass
deployment

Pilots of intelligent
gateway

Q1 2018

Intelligent
gateway is ready
for mass
deployment

JCP-Connect

a portfolio of mobile computing
products

*Glimpsing the light is
an utopia, but it should
be the objective of a life*

JCP C

What we do

A line of caching products for content delivery and IoT

MoBcache

- A product for ad-hoc, customizable and low-cost internet traffic optimization, aiming to deliver dramatically improved end-user experience in industries where available internet connectivity is of poor quality, unreliable or upgrades are expensive.
- Targeted at: universities, schools, libraries, corporate clients, event management, hotels, cruise ships, etc.

CAMION

- CAMION offers seamless internet experience in buses, metro, train & integration with smart transport systems and content portals. It guarantees no-failure and fast speed for a fraction of the cost of a network upgrade.
- Targeted at: municipalities, transport companies.

Intelligent gateway

- Secure Intelligent gateway with "fog" computing capabilities. The gateway is part of an integrated system developed in partnership with surveillance companies and STMicroelectronics. Support for LPWAN (LoRa and 6LowPAN).
- Targeted at: smart security surveillance and police.

Our Vision

Our vision is a seamless mobile internet combining user connection and machine to machine.

We are:

- EIT Digital partner
- B<>COM partner
- ETSI member

Founded in 2002 as a technology consultancy company with heavy involvement in European and national R&D projects.

Following our extensive efforts in EU R&D projects we have developed a caching technology, which plays the role of a core building block in our content delivery products and will be enhanced with IoT functionalities for our intelligent gateway

Projects:

JCP-Connect is developing its technology in a number of European R&D funded projects:

- COMBO - new integrated approaches for Fixed / Mobile Converged (FMC) broadband access / aggregation networks for different scenarios (dense urban, urban, rural).
- CAMION - cost-efficient, QoE-optimized content delivery on the move, allowing for faster content access, as well as "offline" operation, while improving wireless network capacity and coverage.
- FORENSOR – smart autonomous video surveillance sensor
- CrowdRec – recommender systems

After 20+ fruitful years in the Telecom industry I wanted to create a company where relation and well being matter, and deploy products which encourage social contact between people

Jean-Charles Point (Founder and CEO)

The Future

The Internet of Things is changing our everyday lives. JCP-C (in partnership with FON) is planning to extend the capabilities of CAMION with IoT functionalities.

SCENE

Smart City on the Edge Network Enhancements (SCENE) is a project for a mobile IoT platform for smart city applications based on vehicular networks:

- Collect sensor data from areas frequented by public transport;
- Process the data and send back instructions;
- Support for LoRa, Wi-Fi, Bluetooth, 6LowPAN, LTE etc.
